EDUCATION

İstanbul Sabahattin Zaim University
Bachelor of Science in Software Engineering

İstanbul, Türkiye
Sep 2021 – Jun 2025

EXPERIENCE

Mobile Developer

Huawei Türkiye R&D Center

Dec 2025 – Present
İstanbul, Türkiye

- Develop watch apps on both HarmonyOS platforms: smart wearables in ArkTS with declarative ArkUI and the Stage model, and lite wearables in the HML/CSS/JS framework, which runs only a restricted ES6 subset
- Kits I use and support day to day: Wear Engine (watch-to-phone P2P messaging, device discovery, connection state), Health Service Kit (on-device workout and health data), Health Kit Cloud REST, Location Kit, Background Tasks, Core File Kit
- Support customer teams end to end: talk to their developers directly, review their integration, debug it on real devices, and stay with them until the app is live
- Debug on physical devices, isolate undocumented runtime behaviour, and feed the corrections back into the documentation developers actually read
- Back each role in the delivery chain with the part of the process that belongs to it, from development and build through to store release

Freelance Mobile Developer

Logistics and Transportation Clients

2024 – 2025

İstanbul, Türkiye

- Designed, built and shipped Flutter apps for logistics and transportation clients, each one from first requirement to store release
- Built push notification infrastructure (OneSignal, FCM) delivering instant status updates and critical alerts to drivers and operators in the field
- Ran versioning and staged rollout, then handled post-release feedback, crash reports and fixes
- Worked directly with clients on scope, delivery timelines and maintenance

Mobile Software Intern

İstanbul Metropolitan Municipality

Jul 2024 – Sep 2024

İstanbul, Türkiye

- Contributed to Flutter development and built one app end to end, from first line to release
- Worked hands-on with NFC, AI-assisted features and push notification integration
- Learned corporate release processes, regulatory requirements and user data handling; used Git and contributed to test scenarios

TECHNICAL SKILLS

Languages: Swift, Dart, TypeScript / ArkTS, JavaScript, Python

iOS: SwiftUI, UIKit, Xcode, App Store Connect

Cross-Platform: Flutter, Dart, Provider, REST and GraphQL clients

HarmonyOS: ArkTS V2 / ArkUI (smart wearables), HML/CSS/JS (lite wearables), DevEco Studio

Huawei Kits: Wear Engine, Health Service Kit, Health Kit Cloud REST, Location Kit, Background Tasks, Core File Kit

Backend & Data: Firebase, REST, GraphQL, local persistence, push notifications (FCM, OneSignal)

Practices: MVVM, SOLID, Git, on-device debugging, staged rollout, release support, technical documentation

LANGUAGES

Turkish (Native), English (C1), German (A2)
